

ADITYA RAJ

Full-Stack Software Engineer | Java | Node.js | React | REST APIs | Spring Boot

+91-7070694389 | aditya13raja@gmail.com | github.com/adirajDev | linkedin.com/in/adirajdev

Bengaluru, India

Summary

Backend-focused full-stack engineer with hands-on experience designing 45+ REST APIs, JWT-based RBAC systems, and real-time features across Java/Spring Boot and MERN stacks. Built two full-stack systems independently: an alumni networking platform and a real estate marketplace. Currently deepening backend expertise through a Spring Boot and PostgreSQL migration project. Open to full-time backend and full-stack engineering roles.

Technical Skills

- **Backend & APIs:** Spring Boot, Node.js, Express.js, Go Fiber, RESTful API Design, JWT Authentication, Role-Based Access Control (RBAC), Service-Layer Architecture, JPA / Hibernate, Request Validation, Centralized Exception Handling
- **Languages:** Java, JavaScript, TypeScript, Go, HTML5, CSS3
- **Databases & Storage:** PostgreSQL, SQL, MongoDB, Firebase (Auth & Storage)
- **Frontend:** React.js, Next.js, Redux Toolkit, TailwindCSS, Responsive UI Design
- **Tools & Practices:** Git/GitHub, Maven, Postman, cURL, Data Structures & Algorithms, Clean Architecture

Experience

Full-Stack Development Intern

Jul 2026 – Present

Jain (Deemed-to-be University)

Bengaluru, India

- Designed and developed a college and exam discovery platform independently (React, Node/Express, MongoDB), implementing 45+ REST APIs across 4 role-based user types (student, admin, editor, college).
- Refactored the backend from logic-heavy controllers to a feature-based, layered architecture (routes to controllers to services per feature, with shared middleware and utilities), migrating auth, colleges, courses, and ratings without disrupting existing functionality.
- Implemented JWT authentication with role-based authorization on every secured route, then built two distinct UI experiences on the same role system: a topbar layout for students, a sidebar layout for admin, editor, and college roles.
- Replaced a forced password-reset flow with OTP-based reset to fix UX friction, and built reusable pagination and global search modules adopted across every management table, cutting duplicate implementation across modules.

Projects

Alumni-Student Networking Platform

[Project Link](#)

Go Fiber | MongoDB | React.js | Redux Toolkit | TailwindCSS | JWT | Pusher

- Built a full-stack alumni-student networking platform from scratch across separate frontend and backend repositories, exposing 22 REST APIs for real-time chat, topic-based discussions, blogs, and job postings.
- Designed a two-role (alumni/student) access control system on top of JWT authentication, keeping permissions separate across every API route.
- Integrated Pusher for real-time WebSocket messaging, then built the React frontend with Redux Toolkit and TailwindCSS to keep chat, feed, and job updates in sync.

Real Estate Marketplace

[Project Link](#)

Node.js | Express | MongoDB | React.js | Redux Toolkit | TailwindCSS | Firebase | JWT

- Built a full-stack property marketplace (MERN stack) covering property listing, search, and buyer-seller transactions end to end.
- Implemented dual authentication (Google OAuth and email/password with JWT) and built REST APIs for property CRUD operations, integrating Firebase Storage for image upload and retrieval to keep listing media load times fast.
- Implemented filterable property search on the backend and a state-managed React and Redux Toolkit frontend, letting users query listings by price, location, and property type.

Education

Lovely Professional University, Punjab, India

Bachelor of Technology, Computer Science and Engineering | July 2021 – May 2025 | CGPA: 7.98

Certifications

- Programming in Java, NPTEL (Apr 2023), [Certificate Link](#)
